

All KeySecure units are built to order. This ordering guide assists in determining your department's specific needs.

Knox WiFi conforms to the 802.11 b/g/n standard (2.4 GHz), and Knox Ethernet conforms to the 8023 standard, with IPv4 local addressing.

Supported Security/Encryption

- Open (no encryption)
- WEP - 40/104 characters (ASCII)
- WPA-PSK - TKIP
- WPA/WPA2 - Mixed
- WPA2-PSK - AES
- WPA2-EAP-TLS
- WPA2-EAP-PEAP with TLS
- WPA2-EAP-PEAP with MSCHAP

NOTE: EAP-FAST is not currently supported. Contact tech support if your encryption type is not listed.

Ports required for communication

- 443 - SSL communication
- 123 - Network Time Protocol

Network details are required to achieve accurate ordering and implementation

To properly order and install the Knox KeySecure 6 system on your network, the following information is required from your network administrator:

- Are static IP addresses used on your network?
- Do you have Internet access on your network?
- What Operating System (OS) and version are you using?
- What encryption do you use on your wireless network?
- Will you be using WiFi or Ethernet?
- If using WiFi, what is your SSID?
- If using WiFi, do you know pass phrase?
